

Admission Barthel category as an occupational therapy dosing rule

Recovery peaks in the severe group in both absolute points and share of what was recoverable — that is where dose should concentrate.

Admission category	Patients	Mean Δ BI	Headroom recovered	Indicated OT dose
Total BI <20	13	+24	24%	→ Highest daily frequency, plus caregiver training
Severe BI 20–35	25	+49	69%	→ Highest daily frequency — largest achievable return
Moderate BI 40–55	11	+28	50%	→ Standard daily frequency
Mild BI 60–99	25	+13	49%	→ Task-specific, discharge-oriented
