

Recovery by admission Barthel category

Recovery peaks in the severe group, in both absolute points and in share of what was recoverable.

Admission category	Patients	Mean Δ BI	Headroom recovered	<i>Proposed dose</i> <i>AUTHORS' INFERENCE,</i> <i>NOT A RESULT</i>	
Total BI <20	13	+24	24%	—	
Severe BI 20–35	25	+49	69%	Priority for the highest daily session frequency	
Moderate BI 40–55	11	+28	50%	—	
Mild BI 60–99	25	+13	49%	—	

This cohort did not measure occupational therapy dose: every patient received what the unit provided, with no variation to compare. The single proposal above rests on the recovery pattern observed here together with external dose evidence, and is an inference by the authors, not a finding of this study. No differentiated recommendation is made for the other categories, and none is supported by these data.
